

integrated docking systems

handler-attached
dib-loading system
board change
in less than 1 minute

esmo
semicon

key features

quick + easy board change in less than one minute, by one person only (one-person operation)

highly efficient + time-saving operation

highest repeatability due to –

- mechanical test head/handler connection during board change process
- statically defined test head positioning

sensor monitoring feature preventing operating errors

short-term return of investment

dedicated for final test processes

high locking force

single-sequence operation for docking/undocking

programmable user interface

individual password-protected control options

contact force fully compensated by locking system

durable + robust design

compatible with great variety of test head solutions

designed for high parallel test setups

customer-testified yield improvement by 3% due to permanent, mechanical tester/handler connection – no time-consuming troubleshooting required, no stress on the boards
